TheiaOne
AI SYSTEMS LLP

# AI-Native
# Precision Partner.

TheiaOne AI Systems LLP designs and delivers AI-led software for established firms and startups.
A live system, or an idea taken through to implementation. We learn the business before we start.

# What this firm is

| | |
|---|---|
| **The offer** | AI-led software and agentic systems. A live system, or an idea taken through to implementation. |
| **The method** | TheiaOne Agentic Delivery Framework. AI does the acceleration. A person signs the gate. |
| **The start** | A two-week Diagnose. Outcomes, constraints, and the measure of done. Then build, oversee, or stop. |
| **The limit** | Founder-supervised. A named person stays on the work. Commodity staff augmentation is not the offer. |

# Who it is for

Established firms and startups. A live system, or an idea that has to become one.

| | |
|---|---|
| **Place** | United States, United Kingdom, Europe, or Australia. The client is usually abroad. |
| **Size** | Often twenty to two hundred people. One person who can decide. |
| **Owner** | One product owner who can decide, and who will read a written note. |
| **System** | A live system, or an idea we take through to implementation after we understand the business. |

# How an engagement runs

| | | |
|---|---|---|
| 1 | **Conversation** | A written problem. Not a résumé exchange. |
| 2 | **Diagnose** | Two weeks. Scope, constraints, metric, and a written decision. |
| 3 | **Oversee or build** | Client Partner if the firm needs a senior on the work. Build only after Diagnose. |
| 4 | **Handover** | Code, decisions, and intellectual property, in writing. |

# What Diagnose produces

A paid two-week piece of work. It is not a free audit and not a proposal dressed as discovery.

## Scope

What is running, what must not break, and who signs each gate.

## Constraints

Data location, security, timeline, and the budget that is real.

## Metric

The number or the behaviour that will say the work succeeded.

## Decision

Build, oversee, or stop. Written, before any implementation starts.

# The four lines of work

| | |
|---|---|
| **Diagnose** | The start. Two weeks. A written decision at the end. |
| **Data and AI advisory** | Where the data sits, what a model may do, and what a person must sign. No training on client data. |
| **Agentic systems** | Multi-step work with a human gate. An agent fetches and prepares. It does not decide. |
| **AI-led software** | Implementation against the metric agreed in Diagnose. Validation before handover. |

# How capacity works

The founder stays on the work. People are added for the signed engagement.

| | |
|---|---|
| **Today** | Pushkarprabhat Saxena, Founder. Architecture, delivery, and client accountability sit with him. |
| **On a signed engagement** | Contract or direct capacity is added for that engagement. Remote or on the client site. |
| **What is not offered** | A rate card of juniors. Commodity staff augmentation. |
| **What the client gets** | One accountable person, written progress, and capacity added for the signed engagement. |

# Rules that do not move

| | |
|---|---|
| **No training on client data** | A foundation model is not trained on a client’s records. Ever. |
| **A person signs** | Architecture, security, and quality have a named owner. A tool does not close them. |
| **Written progress** | Status is a note. Not a call that leaves no record. |
| **Clean handover** | Code and intellectual property transfer at the end, in writing. |
| **Limited load** | Few engagements at a time, so founder supervision is real. |

# The firm, in facts

| | |
|---|---|
| **Entity** | TheiaOne AI Systems LLP |
| **Contact** | contact@theiaone-ai.com |
| **LLPIN** | ADA-3003 |
| **Recognition** | DPIIT Startup, DIPP279278. Sector: Machine Learning. |
| **Registered office** | 308, City Center 2, Science City Road, Sola, Ahmedabad 380060, India |
| **Brand** | Owned by TheiaOne Ventures. Used by the LLP under licence. |
| **Founder** | Pushkarprabhat Saxena. Designated partner with Bhawna Saxena. |
